FEMININE ENTREPRENEURSHIP AS A RESEARCH THEME. SOME CONSIDERATIONS REGARDING THE WAY OF INITIATING A BUSINESS BY THE ENTREPRENEUR WOMEN IN THE WEST OF ROMANIA

Pop Cohuţ Ioana
University of Oradea, Faculty of Economics

The present paper aims an incursion in the concern for researches in the field of feminine entrepreneurship – as a research theme, the study directions of the feminine entrepreneurship, on the basis of the special literature in the field. The applicative part of the paper refers to the research taken in the field of feminine entrepreneurship in Romania, through the project AntrES, in the area of the initiation way of business by entrepreneur women investigated and aligns aspects regarding the research methodology, the study of the way of initiating a business, the length with the age of manager women, the occupational situation at the moment of business initiation and their previous experience.

Key words: Entrepreneurship, feminine entrepreneurship, women entrepreneur, business start up, occupational situation

JEL code: E24, R11, J24,

Feminine entrepreneurship – research theme
Entrepreneurship is defined, from historic point of view, as an area with predilection masculine. The first characteristics of the entrepreneur included the notion of „the leader of industry” („Captain Man”), „man with initiative” (enterprising man), „basis man” „Key man” or „the man who organizes the firm and/or increases its productive capacity”. Also, the literature in the field, describes the entrepreneurial theories as being „created by men, for men and applicable to men”. These definitions centered mainly on the entrepreneur, are not surprisingly because,
from historical point of view, for many decades, they have been the most active in initiation,
ownership and developing businesses.
More recent definitions of the entrepreneurship are less gender centered, suggesting that
entrepreneurs that make activities that bring an added value depending on certain conditions. Like this, entrepreneurs are definite as being all who:
- try to find opportunities without considering the resources they control;
- create economic innovative organizations to obtain advantages and grow under risk and incertitude conditions;
- discovers, evaluates and exploits the opportunities to introduce new goods and services.
Even though the feminine entrepreneurship is defined in terms of creative activity, owner of the business of self-employed, a very big percentage of men and women are implied in entrepreneurship in all developed countries, even though there is a tendency of growing the feminine entrepreneurship in many of these countries. In the period 1975-1995, the percentage of women entrepreneur has raised with more than 60%, comparatively to the 20% growth of men entrepreneur. This growth has been registered until 1955, when, the percentage of those remained 12%, percentage who registered a tendency to increase only after the ’90’s. In Europe, women entrepreneur are a minority, even so the proportion of those varies considerable from over 20% in England, Ireland, Sweden to 40% in Belgium and Portugal.
Into the first notable article dedicated to the feminine entrepreneurship published at the middle of ‘70’s, published by Eleanor Brantley Schwartz’s (1976), the article „Entrepreneurship – a new feminine border“, the writer appreciated that, the same like men, women are motivated by the wish of accomplishment, work satisfaction and independence. Also, other authors, Schwartz (1976), followed by Hisrich and Brush (1983, 1984, 1985, 1986, 1987) who have described the abilities of women entrepreneur and their business, reached to the conclusion that women’s motivations are similar with men’s motivations, but they are less qualified, less capable, less trained in the field of business, have a smaller inclination to entrepreneurship and manage to settle a business in a slower rhythm than men. Even though the preoccupations in the field of studying feminine entrepreneurship are growing, authors who have hold on inspection the profession bibliography show that approximately 7% of the articles published between 1969 and 1994 have included and have centered on business women. In 2000, the percentage of the

219 Casson Mark; Yeung Bernard; Basu Anuradha, Wadeson Nigel, op. cit., p. 611;
articles on this topics reached 6%\textsuperscript{223}. Also, other authors who have reviewed the articles written in the field of feminine entrepreneurship, counting over 400 scientific papers and several articles, published in professional magazines in the last years, have reached the same conclusion, which is that women entrepreneur represent, for sure, a field very little researched. This thing is surprisingly considering the fact that they register the most significant growth in line of entrepreneurs, the contributions of women entrepreneur being significant in innovation, creating workplaces and developing the business environment. Even though there is in the last decades an obvious concern for the domain, the specialty papers highlight that they have not managed to build adequate theories, particularly over the gender concept and the way in which entrepreneur’s women experience are reflected in the socio-economic context\textsuperscript{224}. Though, the research directions synthesize by the specialty papers in the field of feminine entrepreneurship are centered on the following directions\textsuperscript{225}:

- characteristics and motivations of women entrepreneurs, with subthemes: differences in psychological characteristics between men and women, social background and business differences between women and men, the effect of labour market in the women’s decision to start in business;
- the start-up patterns, resources and constrains, with subthemes: motivations, processes and structures used at start-up businesses, resource acquisition and mobilization including finance, social and human capital; the business start-up pattern and long-term performances of the business; Programs and development politics of women entrepreneurs;
- management of female-owned firms, with the following sub-themes: women’s management style and approach to leadership; the family business and the wish of accomplishment; gender effects over the performance of the business;
- finance issues of female start-up businesses, with the subthemes: access to financing resources, guarantees on loans and relationship with external lenders and women’s credibility;
- business relationships built by the female entrepreneurs, with the subthemes: gender differences in building business relationship; gender differences in the contain and the different approach to forming relationships;
- business performances and their growth, with subthemes: gender differences and criterions used in obtaining business performance; business performance in nowadays business performances.

Synthesizing these research directions, we observe that referring to Romania, the interests for studying female entrepreneurship are modest. A review of the publications in this field shows a lack of preoccupation of the researches for this field, even though it is registered a similar trend to the European one, of growing the number of female entrepreneurs in the last ten years. Even so, the research directions emphasized in the specialty literature, have raised interest in the research activity realized during the project AntrES, who through the research made until this moment and the one that is prefigured to be outlined at the end of the project (January 2011), aligns in the study interests of the Romanian female entrepreneurship, especially on the North-West of Romania.

Aspects regarding the research methodology

The data base that stays at the basis of the present paper is constituted from the answers registered at the Questionnaires of research-monitoring applied on a total number of 153 respondents – manager women, from the territorial centers created in the AntrES project, distributed as it follows: Baia Mare - 24, Satu Mare - 24, Oradea - 30, Arad - 27, Timişoara - 24, Reşiţa - 24.

The questionnaires applied to this target group I – manager women, have been constituted in a number of 52 questions, grouped as it follows: 39 questions in section A – Questions about entrepreneur/manager women and their businesses; 13 questions in section B – Aspects regarding the psychological profile of women entrepreneur/manager.

The present paper proposes to analyze answers given by women manager at section A – questions that have outlined at female entrepreneurs the following characteristics: the way of acquiring the business, the length with the age of business women, their previous experience.

The study of the way of acquiring the business and the lengths validated

The majority of the persons from the data base of the manager women from AntrES, respective 85%, are at their first business developed, so the valid affirmations for the actual business are valid for the first business as well as a result. In the case of the first business, the age of respondents at its start-up is, for most of them, in the group 26-30 years, followed, with frequencies approximately equal, by the groups of 19-25 years, respective 31-35 years. This means that 78% of the persons who answered were, at the moment of starting-up their own business, aged under 35 years, thing that confirms the appetite for entrepreneurship and for risks higher in younger ages (Graphic nr.1 – The age of manager women from AntrES research at the start-up of their first business).

226 These questionnaires have been applied, in the period 07.17.2009-07.31.2009, according to the Methodology of developing the research-monitoring activity using questionnaires, with the Instructions of application of the questionnaires and with the Instructions of filling in the data base, documents realized in AntrES project.

227 Target group I in the project AntrES – business women – who which to develop their business, form the counties situated along the West border (Maramureş, Satu-Mare, Bihor, Arad, Timiş, Caraş-Severin). For this target group, the projects wants to develop the managerial abilities, intra and entrepreneurial, in order to develop the existing business, for the optimum utilization of the opportunities existing on the market, of the success factors that raise competitiveness, of the management and marketing strategies etc. and promoting the adaptability, with effects upon performance, the SME’s stability and the occupation level.

![Bar chart showing the age distribution of manager women.]

Though, the entrepreneurs have not been out of any professional experience at the beginning of their business, 78% of them declare that they have not worked forever in their own business, so they had previous workplaces, before their started their own business (Graphic nr. 2. Previous experience of entrepreneur of the manager women form AntrES data base). In average, manager women who have worked in other places than their own business, had two previous workplaces, the highest number of previous workplaces being 6.

Source: ***Progress report nr. 2 –Research-monitoring study - aggregate and comparative – at inter-regional level, realized in the project AntrES.

As the majority of the entrepreneurs begun their business alone, it is interesting to emphasize the main reasons, as well as the context in which they decided to start-up their own business. So, referring to the occupational situation in the moment of business start-up, 35.3% of the respondents have declared that they had a workplace but the salary was unsatisfying, 16.7% did not have a workplace, 15.7% were happy with their workplace, 8.7% had a workplace but were going to lose it, 5.3% had a workplace but the conditions were difficult, 4% declared that they had a workplace but the relationships at the workplace were unsatisfying. Quantifying, over two
thirds of them either did not have a workplace or were going to lose it, or they were unhappy with their workplace that they had because of their salary, work conditions, climate etc. Though, it is to be remarked that the unhappiness towards the occupational statute from the respective moment has been associated with the apparition of a special business, with a favorable conjuncture 29.45% or with a special business opportunity (28.77%). These conditions – unhappiness towards status quo, but the favorable moment for expressing the business idea – describe the context in which the nowadays entrepreneurs have assumed the risks of starting-up a business.

Regarding the business start-up determined by the motivation of self-determination, participants have been asked in to what extent they agree the affirmation „I started the business to demonstrate myself and those around me that I can succeed”; only 7.8% declared that they have not been determined at all by such motivations, while 41.8% have declared that they largely agree with this affirmation (24.8% have declared that totally they agree with the affirmation, and the same percentage has been registered for those who have declared their agreement in a small percentage with the affirmation).

Conclusions
As a result of our study, we conclude with emphasizing on the following correlations: there is a significant negative correlation between the age and the year of the business start-up, in other words as much as the age of the respondents grows as much the year of starting up the business decreases; the average age of women who have always worked in their own business is significantly smaller than the average age of the women who had other work places as well, on the extent to which the age increases at the moment of the business initiation, increases the number of workplaces that they had previous. The analyses did not emphasize a significant relationship between the age of the entrepreneurs at the moment of present business settlement and the number of businesses started up until present. In other words, we cannot state that older women have a bigger experience in entrepreneurship comparatively with the younger ones. The factors considered more important in the decision to initiate a business look to be those bounded to the opportunity and not to need, even though enumerating the problems from the occupational situation from the start up moment, the problem of the unsatisfying salary appears as prevailing, followed by the lack of a work place (more than 53% of the respondent persons have stated that at the moment of the business settlement they had a workplace but were not happy with the salary). It is, like this, possible that the answers related to the entrepreneurial mobile to be rather desirable and not to present correctly the accent on opportunity towards the need. On this conclusion join, besides, the results obtained as a result of a study taken on the theme of entrepreneurship, made by 162 Romanian firms initiated after 1990228, study that revealed that the main reason for which the Romanian entrepreneurs have started their businesses has been the “opportunity”, followed by “the wish to use their experience”. This result coincides with the entrepreneurial theories accepted all around the world, according to which “the opportunity” is the main reason for starting-up a business”229.
